January 30, 2010

S-THUNDER SUCCESSFULLY LAUNCHED AT LAS VEGAS SHOT SHOW

Mr Yu-Hon Li, Director - Business Development of S-Thunder Limited states that S-Thunder's gas grenade and gas landmine product lines are designed and engineered completely differently compared to other traditional airsoft grenade and airsoft landmine products from other companies. S-Thunder is currently patenting the designs for the gas grenades, gas landmines and its Super Paintball Marker model SPM-100 as S-Thunder's design enhances the durability of the gas discharge mechanism and efficiently uses CO₂. Under normal operation, our gas grenades and gas landmines are able to hold charges for several days and are designed to cycle for months before the gas core needs to be replaced - and the CO₂ replacement is affordable at US\$8.99. This same technology is applied to our CO₂ accessories and users will find that S-Thunder's CO₂ accessories will not leak gas for weeks at a time as we also developed a special O-ring compound that can tolerate the extreme pressure and temperature changes when using CO₂ and as documented in our website, www.s-thunder.com, we do not offer O-rings as we feel they are not necessary.

One of S-Thunder's goals is to help make airsoft and paintball more affordable in order to broaden the sports' appeal. Our gas grenades come with a standard top gas / green gas core, but this can be converted to use CO₂ with a quick switch to a CO₂ gas core. After demonstrating our units at the Shot Show, we were extremely surprised in receiving much positive feedback and interest from several dozens of companies involved in military / tactical / police training as they found our units to be both affordable, durable and functional. We feel that along with the interest from importers and retailers, we may be able to offer a product that will make war games more fun and realistic for everyone. S-Thunder is currently in discussions with major distributors in the USA, UK, Germany, Denmark, Sweden and others. We recommend that interested parties contact their local retailers regarding availability of S-Thunder's products or they can visit the S-Thunder website at www.s-thunder.com.

COMPANY BACKGROUND

S-Thunder offers high quality & durable paintball and airsoft products at low entry prices. Our product line is designed, engineered and manufactured at S-Thunder's manufacturing facility in Hong Kong and the manufacturing savings are passed to our customers.

S-Thunder was formed by a group of industrial designers, engineers, manufacturers and marketers who are also war game hobbyists. During their years as players, they also became skilled in modifying and enhancing the performance and accuracy of war games airsoft equipment and accessories that included paintball markers, airsoft and Airsoft Electric Guns (AEG).

S-Thunder started as an Original Equipment Manufacturer (OEM) for high end airsoft guns. After extensive experience in manufacturing airsoft guns for well known brands, S-Thunder's engineering team came upon the realization that most war game equipment utilizes engineering and designs that are considered evolutionary years ago, but are no longer state of the art by today's engineering standards and innovations. With this knowledge, S-Thunder developed all new designs, engineering and manufacturing methods that are now patent pending and will be applied to a new line of war game equipment. Before S-Thunder's product line launch, some products have already been purchased and rebranded by other airsoft brands and some of these products have been sold to end users such as the military and police forces. All S-Thunder products are simple in design, easy to maintain out performs most products currently available in the market.

Any questions, inquiries or requests can be addressed to the following,
- Mr Ferdinand Koo, Director, Sales & Marketing, email: fkoo@s-thunder.com
- Mr Yu-Hon Li, Director, Business Development, email: yhli@s-thunder.com

Thank you for your consideration.
