S-THUNDER GRENADE LAUNCHER REVIEW

Since their debut at Shot Show 2010 last January, S-THUNDER has released several new alternative weaponry for airsofters. S-THUNDER had sent their new line of 40mm pistol grenade launchers for CHAIRSOFTMAGAZINE for us to review. We are combining this review into one since most features on each pistol launcher are the same with the exception of a few material changes and add-ons.

We wanted to offer our readers a full comparison of each launcher so that you can choose which one will suit your style of play. We were very impressed by the quality of manufacturing and also the affordability of these launchers. With the exception of the long barrel version, standard 40mm grenades load right up to the tip of the muzzle. The safety and reload tabs are easily reached by your right hand thumb as these are not ambidexterous.

Many thanks goes out to WWW.S-THUNDER.COM for sending us these launchers for review!

ABS SHORT BARREL

MATERIALS: ABS COMPOSITE
LENGTH: 8.75 INCHES
BARREL LENGTH: 4.5 INCHES
WIDTH: 2 INCHES
HEIGHT: 6 INCHES
WEIGHT: APPROXIMATELY .35 LBS
M.S.R.P.: \$69.99 USD

DETAILS:

The ABS SHORT barrel is the budget entry from S-THUNDER. It offers no bells or whistles as it is a pure bare bones model. It is a manual breach loaded launcher with a nice textured grip. This model will fit most generic pistol holsters and is a fun addition if you do not want to mount it on your rifle making it front heavy.

METAL SHORT BARREL

MATERIALS: ABS GRIP / METAL BODY
LENGTH: 8.75 INCHES
BARREL LENGTH: 4.5 INCHES
WIDTH: 2 INCHES
HEIGHT: 6 INCHES
WEIGHT: APPROXIMATELY 1 LBS
M.S.R.P.: \$99.99 USD

DETAILS:

The METAL SHORT barrel is the more versatile launcher system that S-THUNDER offers. The most apparent addition is the rail system that allows players to mount either a sight system or mount it to the front of your rifle. This model has a full metal body, with a spring assisted breach loading system. If you are looking for a short pistol type launcher to mount on your weapon then this is the one for you!

ABS LONG BARREL

MATERIALS: ABS COMPOSITE
LENGTH: 11.75 INCHES
BARREL LENGTH: 7.25 INCHES
WIDTH: 2 INCHES
HEIGHT: 6 INCHES
WEIGHT: APPROXIMATELY .5 LBS
M.S.R.P.: \$74.99 USD

DETAILS:

The ABS LONG barrel is the last offering from S-THUNDER. It offers no bells or whistles like its short brother, as it is a pure bare bones model. It is a manual breach loaded launcher with a nice textured grip. This model was made for the extended S-THUNDER long barrel foam ball grenades or longer 40mm shells. Many players use this launcher with short 40mm shells and nerf rockets. *(Although standard nerf rockets will stick out a bit.) If you have longer 40mm shells this will protect it from damage.
